

### EXCELLENCE IN INTEGRATION

The TerraServer combines the integrated software and operation management together. There are two parts of the TerraServer. One is the backend service (TerraServer Service), and the other is the front-end user interface (TerraServer Client), allowing multiple PCs/users to log on remotely.

TerraServer also applies in Public Address & Evacuation purposes which rest on a TCP/IP networking architecture. The TerraServer provides streaming media, IPS (Internet Paging Service) paging, pre-arrange the audio files, remote store for chime, web page banners, themes, fonts and USB messages etc., play prerecorded messages, scheduler, priority announcements, multiple devices management & monitoring or routing music through the network from a central based server and/or operator unit.

### FEATURES

- Multiple devices management & monitoring for TERRACOM, ATEĪS, XAVTEL products
- Streaming media & broadcasting
- Scheduler for background music
- Ethernet, TCP/IP, VLAN compliant
- Message recording, store and play simultaneously
- Pre-arrange the audio sources and apply them into the Terracom devices
- Remote Store (chime, messages, web banner etc.)
- Up to 99 priority levels

**FUNCTIONALITIES**

**CONFIGURATION & USER INTERFACE**

The software can also be installed on multiple computers on the clients side at the same time, associating with microphone paging desks, IP matrix and IP terminals. This PC server is also used for system configuration settings and logging which can be linked to a back-up server system.

**IN-STORE**

The In-Store function enables users to make prearrangements for the audio sources and to apply the sources to all TERRACOM devices. The sources include music files, radio channels, prerecorded messages. Its date and time can be configured and be carried out in a few easy steps via TerraServer.

**SCHEDULER**

In some applications, such as schools, you will need to schedule the announcement and music play list. TerraServer proposes a scheduler programming with different events for daily, weekly, monthly or play task.

**REMOTE STORE**

The TerraServer can handle mass audio sources of TERRACOM devices in a time-saving control interface. The Remote Store including the file storage (both image and audio sources) and also storing into multiple TERRACOM devices at the same time. Additionally, you can also delete the chime storage, web page banners storage, USB messages storage, PPM IT-5 theme/fonts storage and radio storage with only a few simple steps required.

**BACKGROUND MUSIC**

Thanks to priority management, background music playing and announcements will work seamlessly without disturbing each other. The background music can be played from either a play list or dedicated hardware inputs such as a CD player, for music playing and priority announcements.
