1. Object

- 1.1. The object of this Report is to present measurements of the acoustic performance of the MHS 20/TC device.

2. Scope

- 2.1. The following characteristics were measured

- On-axis frequency response
- Polar response
- Impedance
- Applied voltage
- On-axis 3rd octave band sound pressure level

from which the following are calculated

- a) Directivity Index (dB), tabulated and graphical
- b) Directivity factor, Q
- c) Effective octave band impedance
- d) Octave band Sensitivity (dB @ 1m, 1W/oct)
- e) Overall Sensitivity:
 - dBA @ 1m, 1W
 - dBlin @ 1m, 1W
 - 250Hz-4kHz @ 1m, 1W
 - Speech shape @ 1m, 1W
- f) Acoustic Power (dB-PWL @ 1W), tabulated and graphical
- g) Octave band Power Apportionment (%)
- h) Impedance bode plot
- i) Expected maximum Sound pressure level (dB @ 1m)
- j) Frequency response chart
- k) Polar response charts

3. Method

- 3.1. The device was mounted in Free Space as shown in figure 1 – Mounting method E.
- 3.2. The measurements were made in an anechoic chamber.
- 3.3. Measurements were made as detailed in AMS Test Method document No. IR/1a/LS/Meth.
- 3.4. All measurements were made in general accordance with BS 6840: Part 5: 1995.

4. Results

- 4.1. The On-axis 3rd octave frequency response of the device is shown graphically in the appendix.
- 4.2. The Impedance bode plot of the device is shown graphically in the appendix.
- 4.3. Polar plots of the device are shown graphically in the appendix.
- 4.4. Tabulated values of Directivity index, Directivity factor, Sensitivity, Acoustic Power, Power Apportionment, Impedance and Maximum SPL are shown in the Summary data sheet given in the appendix.
- 4.5. The Directivity Index has been calculated using Gerzon' equal angle, weighted area method.

5. Notes

- 5.1. Sensitivity
The octave band sensitivity is produced in its useful form for calculations. It should be noted that the octave band sensitivity is given as dB @ 1m, 1W/Oct. To determine the output when only the overall power is known, then only the overall dBA or dBlin values should be used. For more detailed information refer to AMS Acoustics Data Sheet 'Loudspeaker Sensitivity – Interpretation of Results'.
- 5.2. Polar Plots
For convenience each polar plot has been normalized to 0dB. For this reason caution is advised when comparison of levels between octave bands is made. The reference axis frequency response should be used for comparison purposes.

6. Engineers Notes

Reference point located concentric to horn and in line with mounting bracket.

Reference plane located parallel to horn opening and includes the reference point.
